

Special Focus on Biomolecular Network Analysis and Application

Integrating phenotypic features and tissue-specific information to prioritize disease genes070101(10)
Yue DENG, Lin GAO, Xingli GUO & Bingbo WANG

Identifying disease modules and components of viral infections based on multi-layer networks070102(15)
Yuanyuan LI & Xiufen ZOU

Detecting protein complexes from DPINs by density based clustering with Pigeon-Inspired Optimization Algorithm070103(14)
Xiujuan LEI, Yulian DING & Fang-Xiang WU

Identification of the clustering structure in microbiome data by density clustering on the Manhattan distance070104(7)
Xingpeng JIANG, Xiaohua HU & Tingting HE

Understanding tissue-specificity with human tissue-specific regulatory networks070105(10)
Weili GUO, Lin ZHU, Suping DENG, Xingming ZHAO & Deshuang HUANG

Identifying essential proteins based on dynamic protein-protein interaction networks and RNA-Seq datasets070106(11)
Xuequn SHANG, Yu WANG & Bolin CHEN

Pinning controllability of autonomous Boolean control networks070107(14)
Hongwei CHEN, Jinling LIANG & Zidong WANG

GOAL: the comprehensive gene ontology analysis layer070108(8)
Jong Cheol JEONG, George LI & Xue-Wen CHEN
