### Appendix A Notations and algorithm

In this study, we use capital letters (e.g.,  $X$ ), bold lowercase letters (e.g.,  $\mathbf{x}$ ), and non-bold lowercase letters (e.g.,  $x$ ) to denote sets, vectors, and scalars, respectively. We use  $\mathcal{X}$  and  $\mathcal{Y}$  to represent the input space (i.e., the set of all possible instances) and the output space (i.e., the class label set), respectively. If not otherwise clarified, all vectors are in column form. Table A1 shows notations used in this study, and Table A2 gives the proposed method.

**Table A1** Notations

| Variable             | Description   |
|----------------------|---|
| $p$                  | the target semester for which courses will be predicted   |
| $t$                  | the number of semesters   |
| $k_i$                | the number of courses offered in the $i^{th}$ semester  |
| $\mathbf{c}_{ij}$    | the description vector of the $j^{th}$ course in the $i^{th}$ semester                            |
| $S$                  | the student dataset for training  |
| $P$                  | an unseen student sample  |
| $r$                  | the number of the neighboring examples in $S$   |
| $c$                  | the number of the citers in $S$   |
| $R_P^r$              | the set of $P$ 's $r$ nearest neighbors identified in $S$   |
| $C_P^c$              | the set of $P$ 's $c$ citers identified in $S$  |
| $\vec{\delta}_{X_i}$ | $ \mathcal{Y} $ -dimension vector about the sample $X_i$ , which can be calculated using Eq.( A1) |
| $W$                  | weight matrix to be learned   |
| $Y_i(l)$             | the ground truth of $X_i$ on the $l^{th}$ class   |

$\vec{\delta}_{X_i}$  in Table A1 can be obtained according to Eq.( A1):

$$\vec{\delta}_{X_i}(l) = \sum_{Z \in (R_{X_i}^r \cup C_{X_i}^c)} [\vec{L}_Z(l) == l], \quad l \in \mathcal{Y}. \quad (\text{A1})$$

Here, for any predictor  $\pi$ ,  $[\pi]$  takes the value of 1 if  $\pi$  holds and 0 otherwise.  $\vec{L}_Z(l)$  is the label of the sample  $Z$  on the  $l^{th}$  class.

**Table A2** The student performance prediction algorithm based on MIML-kNN

---

```

Inputs:
  training set  $S = \{(X_i, Y_i) \mid 1 \leq i \leq m\}$ ,  $r$ ,  $c$ , and an unseen student sample  $P$ 
Output:
   $L_P$  : label set for  $P$ 
Begin
% training %
1. for each student sample  $X_i \in S$ 
  (1) Calculate  $R_{X_i}^r$  and  $C_{X_i}^c$  for  $X_i$  according to the similarity metric defined as Eq.(1) in the letter
  (2) Calculate  $\vec{\delta}_{X_i}$  according to Eq.( A1)
  endfor
2. Obtain weight matrix  $W$  through minimizing sum-of-squares error function defined as Eq.(2) in the letter
% testing %
3. Calculate  $R_P^r$  and  $C_P^c$  for  $P$  according to the similarity metric defined as Eq.(1) in the letter
4. Calculate  $\vec{\delta}_P$  for  $P$  according to Eq.( A1)
5. for each target course (i.e., label)  $l \in \mathcal{Y}$  do
  (1) Calculate  $f(P, l)$  according to Eq.(3) in the letter
  (2) Set the final output  $L_P(l)$  for the course  $l$  to be 1 if  $f(P, l) > 0$  holds, otherwise -1.
  endfor
6. Output  $L_P = \{l \mid L_P(l) = 1, l \in \mathcal{Y}\}$ 
End

```

---

## Appendix B Datasets and Experimental results

After data preprocessing and integration, we obtain three MIML datasets, namely “BCS08\_11”, “BET08\_11”, and “GIM08\_11”, as shown in Table B1. The datasets “BCS08\_11”, “BET08\_11”, and “GIM08\_11” correspond to three specialized subjects “electronic technology”, “computer science and technology”, and “computer information management”, respectively. Table B2, Table B3, and Table B4 show the performance of each algorithm on the three datasets after balanced using “over sampling” technology. In order to understand the performance of each algorithm in detail, we also give their macro- $F_{1.5}$  values for each semester, which are shown as Figure B1, Figure B2 and Figure B3. Drawing from the experience in [1], we set the value of  $\beta$  to 1.5 in this study, in order to impose its preference over macro-R.

**Table B1** Datasets for three different computer specialties

| Collective Name | Size | Courses Number | Semesters Number | Positive/Negative samples number |
|-----------------|------|----------------|------------------|----------------------------------|
| BCS08_11        | 68   | 24             | 8                | 10 / 58                          |
| BET08_11        | 97   | 24             | 8                | 15 / 82                          |
| GIM08_11        | 228  | 15             | 5                | 34 / 194                         |
